

Issue edited by: Antoine Bozio, Carl Emmerson, Andreas Peichl, Gemma Tetlow

1

p.405

Changed from:

"While in France and Italy households with children have lost less from tax and benefit reforms than pensioner households, the reverse is true in Ireland and the United Kingdom".

To:

"While in Italy households with children have lost less from tax and benefit reforms than pensioner households, the reverse is true in Ireland and the United Kingdom."

2

p.420

Changed from:

"Pensioner households have also, on average, fared relatively badly in France. This is particularly true in the bottom half of the income distribution, where pensioners have lost similar amounts (as a share of their income) to higher-income pensioners. This is in contrast to working-age families with children, where there have been gains (on average) among those in the bottom half of the income distribution (compared with losses among working-age families with children in the top half of the income distribution)."

To:

"In France, pensioner households have been less affected than the average population, while households with children have fared relatively badly, especially those in work and in the upper half of the income distribution. Households where no adult is in work have been largely protected. This is mainly because of the decrease in the cap of the *quotient familial*, the income tax reductions that children can provide."

3

p.428

Changed from:

"In France and Italy, households with children have lost less, on average, than pensioner households."

To:

"In Italy, households with children have lost less, on average, than pensioner households."

4

p.476

Changed from:

"GDP fell by 7 per cent between 2013 and 2014".

To:

"GDP fell by 13% between 2007 and 2010",
